

LtL Guardian Program

While Beijing is one of the world's safest cities, it is also a big place in which children need to be supervised. To be accepted into an international hospital in case of emergency or apply for visa extensions in China, a guardian is required for all children younger than 18. The LtL guardian program is mandatory for all children younger than 16 and highly recommended for children aged 16-18.

It consists of:

- Parental authorization of an LtL staff member to make medical decisions on behalf of the student in case of emergency admission to an international hospital. Without being accompanied by an authorized adult, International hospitals in Beijing will not admit patients under 18 years of age.
- Parental authorization of an LtL staff member to apply for Visa extensions for the student if necessary and accompany him/her to the necessary government authorities and assist during the interview with the Visa officer.
- Act as a general point of contact between the child and its parents, with regard to special wishes of the parents (i.e. curfew etc.) and assist and help the child with his/her daily life in Beijing.
